EDUCATION AND TRAINING

Education:

1988-9 Post-Doctoral Research Fellow,
Harvard University,
School of Public Health,
Interdisciplinary Programs in Health,
Program in Environmental Health & Public Policy

1988 Ph.D., University of Illinois at Urbana/Champaign
Major: Quantitative Psychology
Split Minor: Experimental and Clinical Psychology

1983 B.A., University of Missouri at St. Louis
Major: Psychology

PROFESSIONAL EXPERIENCE: BRIEF NARRATIVE

From 2022 to 2024, Dr. Holtgrave served in the **White House Office of National Drug Control Policy** (most recently serving as the Senior Associate Director, a post for which his portfolio spanned public health, prevention, and translational research aspects of substance use policy).

He is currently appointed as an Adjunct Professor with the Department of Health, Behavior and Society at **Johns Hopkins Bloomberg School of Public Health** (the Department he Chaired from 2005 to 2018 when employed full time at Hopkins, and in which he served as the Inaugural Health, Behavior and Society Professor). During President Barack Obama's Administration, Dr. Holtgrave served as a member and then Vice-Chair of the **Presidential Advisory Council on HIV/AIDS** (PACHA).

From 2018 to 2022, he was the Dean, SUNY Distinguished Professor, and SUNY Empire Innovation Professor at the School of Public Health, **University at Albany, State University of New York**. During this time, he worked intensively on COVID-19 projects conducted in partnership between SUNY and the New York State Department of Health. He is now SUNY Distinguished Professor Emeritus.

Dr. Holtgrave has also previously served as the Director of the Division of HIV/AIDS Prevention -- Intervention Research & Support at the U.S. Federal **Centers for Disease Control and Prevention (CDC)**, and as Vice-Chair of the Department of Behavioral Sciences and Health Education at the **Emory University Rollins School of Public Health**.

Dr. Holtgrave's more than three decades of research experience has focused heavily on the effectiveness and cost-effectiveness of a variety of HIV prevention and care interventions (including the provision of housing as a structural HIV/AIDS intervention), and the relationship of the findings of these studies to public health policy making. His scholarly works include over 375 professional publications.

Throughout his career, Dr. Holtgrave has focused on bringing the highest quality scientific evidence to bear on urgent public health programmatic and policy decisions. This is evidenced, for example, by his translational work in addressing HIV-related health inequities in the U.S., rapid research to inform COVID-19 clinical decision making, and the development of an evidence-based national response plan to confront the emerging challenge of fentanyl adulterated by xylazine.

Drafted long-term plans for developing new evaluation activities related to HIV prevention programs in the National Center for Prevention Services

Competed successfully for internal funding of projects (e.g., for the development of an evaluation methodology technical assistance document)

Provided consultation on medical decision making to numerous CDC staff persons in various Centers

Co-chaired team to write health services research and evaluation plan for Division of Immunization, National Center for Prevention Services (April 12-May 7, 1993)

Presented numerous seminars on evaluation, behavioral science and decision science within CDC, and in meetings between CDC and its prevention partners (e.g., at meetings of National Minority Organizations, CDC's HIV Advisory Committee, and the National Alliance of State and Territorial AIDS Directors)

Overview of Professional Duties at Centers for Disease Control and Prevention, 1997-2001:

From 1997 until 2001, Dr. Holtgrave served as the *Director of the Division of HIV/AIDS Prevention – Intervention Research and Support*. He was responsible for its leadership and management. The Division had major responsibilities for leading HIV prevention efforts in the United States. The Division had five main mission areas: (a) to fund and support HIV prevention service delivery across the country; (b) to provide necessary technical assistance to build the capacity of service delivery organizations (and transfer scientific findings into effective HIV prevention programs); (c) to conduct rigorous program evaluations of HIV prevention service delivery activities; (d) to conduct HIV prevention intervention research; and (e) analyze and set HIV prevention program policy. Between fiscal year 1997 to fiscal year 2001, the Division's budget grew from \$320.4 million to \$475.9 million, and the combined field and headquarters staff expanded from 193 to over 262 full-time equivalent positions. Division staff grades ranged from worker trainee program participants to GS-15 and Senior Biomedical Research Service members.

Overview of Professional Duties at White House Office of National Drug Control Policy, 2021-2024:

From September 2021 to March 2022, Dr. Holtgrave served as a part-time *Senior Policy Analyst* under an Interagency Personnel Act agreement between the University at Albany and the White House Office of National Drug Control Policy. This work focused heavily on a modernization of methadone project with the National Academy of Medicine, on identifying approaches to measuring nonfatal drug poisonings in the U.S., and on the translation of key prevention and treatment strategies used in other areas of public health (especially HIV, HCV, and COVID-19) to substance use.

Starting in March 2022, Dr. Holtgrave began full-time service in the White House Office of National Drug Control Policy as the *Assistant Director for Translational Research*, and as the *U.S. Emerging and Continuing Threats Coordinator*. This Senior Executive Service position included leading the Office of Translational Research within the White House Office of National Drug Control Policy. Dr. Holtgrave's achievements in this position included the following: (a) playing a central role in "fentanyl adulterated or associated with xylazine" being named an emerging threat to the U.S. (the first time in history the Executive Branch has used this emerging threats authority), and developing and publishing an urgent national response plan; (b) developing and publishing a comprehensive framework and specific criteria for considering potential emerging threats at the earliest possible opportunity; (c) publishing in the *New England Journal of Medicine* a comprehensive overview of the public health and medical imperatives posed by xylazine; (d) also publishing in the *New England Journal of Medicine* a vision for transforming the management of opioid use disorder with universal treatment (including an analysis yielding a first approximation of a care cascade for substance use treatment in the nation); (e) constructing and publishing in the *Journal of the American Medical Association* a vision for the quantitative measurement of nonfatal drug poisonings in the U.S.; (f) developing in partnership with the National Highway Traffic Safety Administration a pioneering, public-facing dashboard displaying quantitative patterns of nonfatal drug poisonings across the country based on first responder data (including equity information on national-level data); (g) performing analyses of the number of lives saved if the goals of the 2022 National Drug Control Strategy are achieved; (h) delivering on managerial responsibility for publishing on the White House website a plan for addressing methamphetamine use in the nation; and (i) overseeing and publishing analyses of state-level data to better estimate the ratio of nonfatal to fatal drug poisonings in the U.S.. Also, in this role, Dr. Holtgrave served as the Chair of the Drug Data Interagency Working Group charged with bringing a whole-of-government approach to improving the comprehensiveness, timeliness, equity, and informativeness of federal substance use data systems. In the White House Office of National Drug Control Policy, Dr. Holtgrave served as the focal point for ensuring that science and data inform substance use programs and policy in the nation.

Beginning on December 17, 2023, Dr. Holtgrave was named the Senior Associate Director of the White House Office of National Drug Control Policy. This expanded his portfolio to include translational research as well as all public health and prevention

aspects of substance use policy in the U.S. In this role, Dr. Holtgrave focused on ways to bring together this broad population health portfolio as rapidly as possible to meet the central goal of the National Drug Control Strategy – namely, that the number of fatal drug poisonings in the nation decrease from over 110,000 to no more than 81,000 in 2025.

On February 24, 2024, Dr. Holtgrave retired from Federal service after nearly two years of full-time effort in the White House Office of National Drug Control Policy, and almost nine years of total Federal employment spanning earlier CDC work and the more recent Executive Office of the President service.
